

Post: Junior Network Engineer

Qualifications & Skills required

- Bachelor's degree in Information Technology, Computer Science, or related field.
- Entry-level experience or internships in network administration or IT.
- Basic understanding of networking concepts, protocols, and hardware.
- Familiarity with network diagnostic tools and troubleshooting techniques.
- Certifications such as CompTIA Network+, Cisco CCNA, or related credentials can be advantageous.
- Strong problem-solving, analytical, and communication skills.

Job Description

1. Assist in configuring and maintaining network devices and systems.
2. Troubleshoot network issues and perform routine maintenance tasks.
3. Assist in installing and upgrading network software and hardware.
4. Monitor network performance and security, identifying potential vulnerabilities.
5. Collaborate with senior engineers to implement network solutions.
6. Provide support for network-related inquiries and technical issues.
7. Document network configurations, processes, and procedures.
8. Assist in conducting network tests and assessments.
9. Learn and apply best practices in network administration and security.
10. Participate in training programs to enhance technical skills
